

How does Hoyt Measure the World?

We listen carefully in this case...

Based on our 100+ years in business we have learned that each customer has their own idea on what a VU meter is based on cost, delivery time, and personal design preferences. The nice thing is we can now accommodate all customer needs. So whether you need a custom Hoyt VU meter built in the USA, a lower cost alternative, or perhaps you are looking for a Sifam Presentor – AL, we can supply them all through Hoyt.

Is it an "A" or "B" scale?

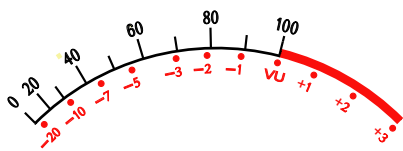

Type "A" Scale

The "A" Scale reads "-20 to +3" in type on the top of the arc, with "0-100" on the bottom of the arc in type. Most common scale used in the industry.

Type "B" Scale

The "B" Scale reads "0 to 100" in type on the top of the arc, with "-20 to +3" on the bottom of the arc in type.

Did you know the VU meter has become so universally accepted that numerous requests have been received to add other scale ranges to the VU Scale for special purposes?

Well, we love those requests so if you have one give us a call or send over an email.

Hoyt Electrical Instrument Works is one of the last TRUE VU manufacturers located in the US.

Hoyt Electrical Instruments Works offers a large variety of standard as well as custom meters, including "Vintage" or "Retro" Style meters

All Hoyt Electrical Instrument Works VU meters can be designed with or without illumination capabilities.

Hoyt also offers the choice of either a Buff or White dial for your VU meter.
